## AGROLIMILK

– to protect trees and plants

The stable lime milk is a mixture of calcium-dihydroxide and water, which is better known as slaked lime. Thanks to its patented technology it does not become sharply lime, and water, the lime component is less prone to sedimentation.

There are several types of Stable lime milk. **Agrolimilk**, a chemical-free agricultural fungicide. **Sunsoftener lime milk**, which is an excellent help for shading in greenhouses or foil tents. **Calcis Antiqua**, which is suitable for restoring monuments. **Sterile lime milk** recommended for bathing livestock feet and painting farm buildings. **TabULA limewashpaint**, which is excellent for painting and whitewashing walls. **Technical grade lime milk**, which can be used for industrial acid neutralization and pH balancing.

# AGROLIMILK

– to protect trees and plants

- Agrolimilk, chemical-free agricultural fungicide, is a solution against nectar bark cancer and other pathogens that cause woody diseases.
- It can be used for apple and stone fruit trees. Agrolimilk should be applied diluted after leaf fall, between the end of October and the end of December.
- It can be sprayed with a spray gun or sprayer on woody parts 2-7 times, with a break of 5-14 days between treatments.
- It can also be used to treat incision wounds or cancerous wounds.
- In this case, it is necessary to apply by brushing, without dilution, directly to the surface of incision wounds or to previously cleaned cancerous wounds. Treatment is recommended 1-2 times, with a minimum interval of 21 days between treatments.
- Agrolimilk fully complies with Regulations (EC) No 1107/2009 and (EU) 2015/762.

The product is available in 25 kg plastic can or in 1200 kg IBC container.
