

STERILE LIME MILK

– for the protection of animals

The stable lime milk is a mixture of calcium-dihydroxide and water, which is better known as slaked lime. Thanks to its patented technology it does not become sharply lime, and water, the lime component is less prone to sedimentation.

There are several types of Stable lime milk. **Agrolimilk**, a chemical-free agricultural fungicide. Sunsoftener lime milk, which is an excellent help for shading in greenhouses or foil tents. **Calcis Antiqua**, which is suitable for restoring monuments. **Sterile lime milk** recommended for bathing livestock feet and painting farm buildings. **TabULA limewashpaint**, which is excellent for painting and whitewashing walls. **Technical grade lime milk**, which can be used for industrial acid neutralization and pH balancing.

STERILE LIME MILK

– for the protection of animals

Sterile lime milk was developed primarily for bathing the feet of farm animals, but it can be easily used for exterior and internal disinfectant painting of livestock buildings, pens and stables, as well as for disinfecting manure and litter.

Sterillime milk is a bactericidal agent with preventive and fungicidal effect.

The jargon "lime sock" is given to the formation of a layer at the foot of cattle that looks like white socks.

It is a substance that is bactericidal and has a fungicidal character. It is not classified as a biocide, but it has a similar effect to a biocide.

Its use is recommended for the prevention of dermatitis digitalis (DD), the most common foot disease in cattle.

Suggested use: drive the animals through the lime milk basin after clawing. Due to its unique, liquid and covering effect, the product forms a coating on the feet of the animal, thereby providing long-lasting protection and a hardening effect. As a level maintenance, foot bathing should be repeated for 5-7 days.

The product is ready for use, there is no need to mix. It is an ideal foot bath material, environmentally friendly, non-toxic, has no health risks, is a natural material, easy to dispose.

It provides an effective, alkaline pH value in the foot bathing pool, after emptying the pool it should not be treated as waste, it is recommended to apply it to acidified soil.

Sterile lime milk is a ready-to-use material that is excellent for painting and whitewashing wall surfaces.

Due to its liquid consistency and fine grain size, it can be applied by spraying or spraying.

It is organic and environmentally friendly, has excellent moisture binding capacity, inhibits mould formation.

It has capitalized moisture and breathability properties and reduces condensation.

It has a great disinfecting effect, does not contain any added additives or chemicals.
