TECHNICAL GRADE LIME MILK

The stable lime milk is a mixture of calcium-dihydroxide and water, which is better known as slaked lime. Thanks to its patented technology it does not become sharply lime, and water, the lime component is less prone to sedimentation.

There are several types of Stable lime milk. **Agrolimilk**, a chemical-free agricultural fungicide. **Sunsoftener lime milk**, which is an excellent help for shading in greenhouses or foil tents. **Calcis Antiqua**, which is suitable for restoring monuments. **Sterile lime milk** recommended for bathing livestock feet and painting farm buildings. **TabULA limewashpaint**, which is excellent for painting and whitewashing walls. **Technical grade lime milk**, which can be used for industrial acid neutralization and pH balancing.

TECHNICAL GRADE LIME MILK

- The technical quality Stable milk of lime is suitable for technical purposes, natural, and environmentally friendly.
- Ideal for pH balancing in the manufacturing, chemical and wastewater industries, to replace sodium hydroxide (NaOH). It dissolves faster in water, due to its alkaline pH it is well suited for adjusting the pH value of water, perfectly suited for neutralizing acids.
- In wastewater treatment, it reduces the moisture content of the sludge, due to its composition there is no conventional salt (NaCl) formation and its use avoids the release of sodium.
- It binds the sulfur content of the wastewater, the gypsum thus formed can be easily separated from the wastewater, and it reduces in greater extent the fat content of the wastewater.
- Product available in 25 kg plastic can, in 1200 kg IBC container, or in bulk.
